How to convert
your logic into
code....?

Reply

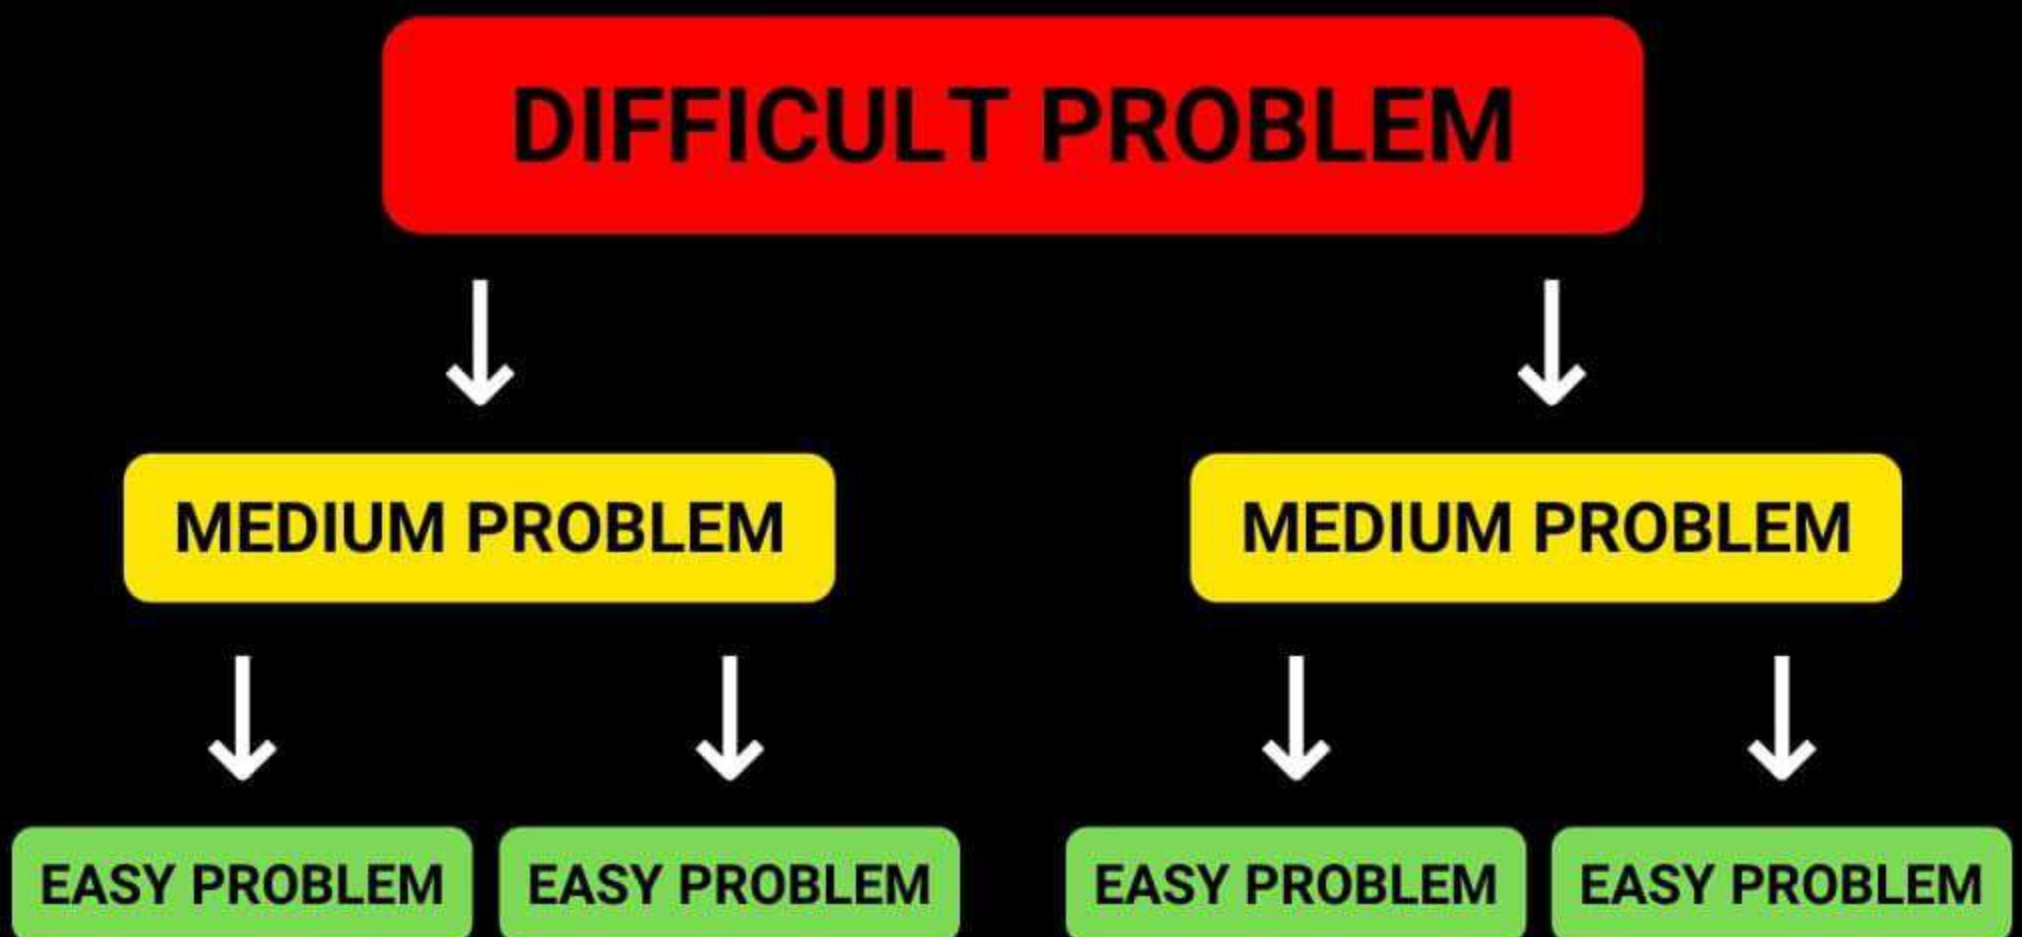

Having a strong logic is **crucial in programming**, as without it you wouldn't be able to solve problems and understand how programs work behind the scenes.

The first tip to improve your logic is to break down the problem you're trying to solve, especially if you're a beginner.

Breaking down the problem into smaller chunks means you've **fully understood it.**

By bringing all the chunks together, you'll be able to solve the initial problem.

However, remember there are no shortcuts: in order to improve, you have to practice.

Consistent practice is the most effective way to get better at any skill, as your mind subconsciously learns from your mistakes and absorbs new information.

Here's what happens if you practice consistently:

**How many hours do
you practice per day?
